

PRESENTATION

-) PROJECT PROGRESS OVERVIEW

AGENDA

Introduction

Initial plans & idea selection

How we started working

Technologies and tools used

Documentations and deadlines

INTRODUCTION

Our team includes:

- 》 Muhammad Rizwan (BSCS51F22S003)
(Team_lead)
- 》 Dua Kiran Faraz (BSCS51F22S002)
- 》 Waleeja Hafeez (BSCS51F22S049)

INTRODUCTION

Our project manager:

☒) Prof Dr. Muhammad ilyaas

Our supervisor:

☒) Dr. Hassam Ali

☒) Mr. Irfan Olak

INITIAL PLANS & IDEA SELECTION

- ♡) local workers and product network
- ♣) Delivery network and communication system
- ◇) Tourist and hotel management system

INITIAL PLANS & IDEA SELECTION

After a detailed meeting with team members and our respect project supervisor we decided our first idea (**Local professionals and product system**) because it covers a variety of people i.e a large numer of stake_holders.

LOCAL PROFESSIONALS & PRODUCT NETWORK

PROUD PAKITANI PROFESSIONALS

CORE FEATURES

-> IT WILL PROVIDE ALMOST ALL TYPE OF DOMESTIC SERVICES.

-> CLIENT AND SERVICE PROVIDER BELONG TO SAME GEOGRAPHICAL BOUNDARY

-> IT WILL PROVIDE CHAT BOX LOCATION AND EXTENDED TIME FOR WORKER TO REACH

PRODUCT NETWORK

Note* (according to our project manager's advice if we include product network the system will become very huge. So we find out a solution , instead of removing the idea we think that we will only advertise products through a window

CORE FEATURES

- > it will provide almost all type of domestic services.
- > client and service provider

HOW WE STARTED WORKING

-) We created group by end of 6th
-) we presented our 3 ideas to our supervisor and idea was selected in 2nd week
-) We lost little bit time in taking further approvals by other professors in dept
-) Then we move towards documentation

WORKING PROCEDURE

- Initially we were lagging in working procedure and we work randomly.
- After 3 or 4 weeks we according to project manager's advice, we started declaring targets and mention achievements of week
- Weekly reports are uploaded of out github account link is given below

LINK OF GITHUB

- <https://github.com/muhammadrizwan99/FYP>

TECHNOLOGIES AND TOOLS

For documentation
For project

TOOLS FOR DOCUMENTATION

In documentation mainly diagrams were build through usinig software **Figma** .
Moreover **microsoft M365 capliot**

The diagrams especially in design documents were sketched by my team members and then after my approval we presented them in front of our supervisor and after his approval became the part of design document.

(status: uploaded)

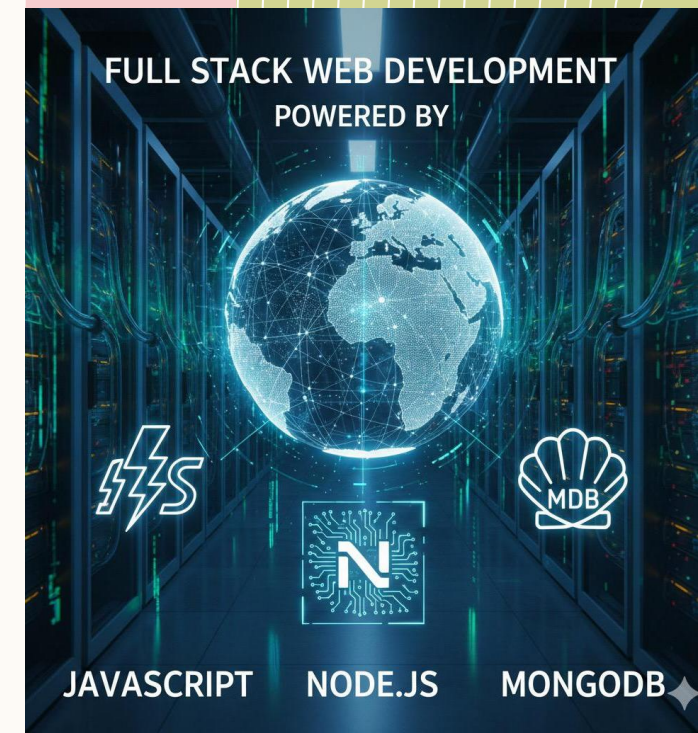

- Architecture diagram
- Use-case diagram
- Component diagrams
- Transition diagrams

TOOLS FOR PROJECT

Basically we are going for full stack development. Tools under considerations are as shown in follownig picture:

-) **Javascript**
-) **Node js**
-) **MongoDb**

We will also include their respective libraries like express.js etc

DOCUMENTATION AND DETAILS

- So basically we had three kind of documents to be submitted this semester
- Project proposal (due by 21 sep 2025)
- SRS document (due by 15 oct 2025)
- Design document (due by 22 dec 2025)

Note* (First two documents i,e project proposal and SRS was uploaded by time . Their signed versions are in physical form . The design document was uploaded 2 days later because it was not reviewed yet.)

- Srs->(software required specification)

"The link of repository is mentioned before"

PROJECT PROPOSAL

- It proposes that our project is region bounded
 - Covers almost all domestic workers
 - Background came after review of **taskbid Sulekha and Service_Traker**
 - Methodology is iterative
 - High level project plan including api usag and system mannagement
- **Project scope:**
 - Authentication
 - Professional Profiles
 - Search and Filtering
 - Rating and Review System
 - Basic Communication
 - User Dashboard

SOFTWARE REQUIREMENT SPECIFICATION (SRS)

- This document mainly includes:
- Overall system description
- Most important users like professional workers, vendors admin and clients
- Operating environment of server (**AWS,Google cloud**) and client (windows,MAC etc) side as well.
- Development environment **NodeJS (express.js)** , **javascript** , **mongoDB (noSQL)**
- It also include Constrains , functionalities and mapping api's

DESIGN DOCUMENT

- It mainly covers the architecture of system and how different components are connected and coordinated with each other
- This is illustrated by the help of different diagrams which are stated as below:
- Architecture diagram
- Use-case diagram
- Component diagrams
- Transition diagrams
- More over the flow of data is driven by the data flow diagrams which presented by levels
- Data flow diagram
- E_R diagram
- Some other diagrams in design document are
- Class diagram
- Sequence diagram
- Stat transition diagram

ADDITIONAL WORK

- (Beside documentation)
- According to sir M.Ilyaas instructions we started work on data_base.
- By end of **week_12** we completed the basic structure of our local data base by connecting mongoDB with node js.
- After completion of **week_14** we add some more collections into data_base structure to satisfy the architecture of out software
- **Note*** (the code is availabe in repository in week_12 folder . The modified code is available as well in week 14 performance evaluation document)
- The details about software are already mentioned in respective documents

PRESENTATION

- This was little bit presentation of procedure which we adopt during our project formation

Further details about software are described in respective documents which are uploaded on repository . Link is described below.
